

Schaller

Western I, II, III

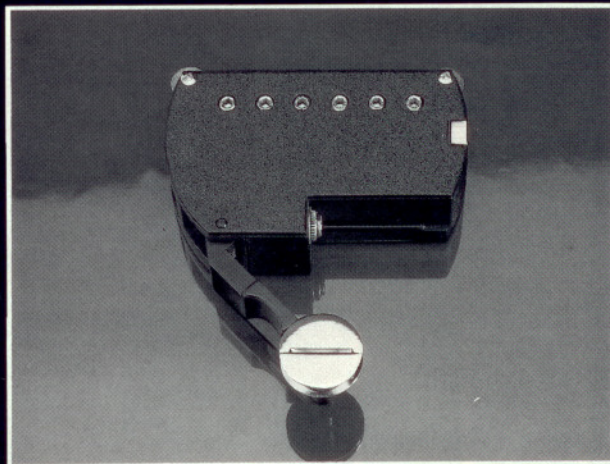

# New Western pickups from Schaller

**This new series of acoustic guitar pickups offers the guitarist the natural acoustic guitar sound without the feedback.**

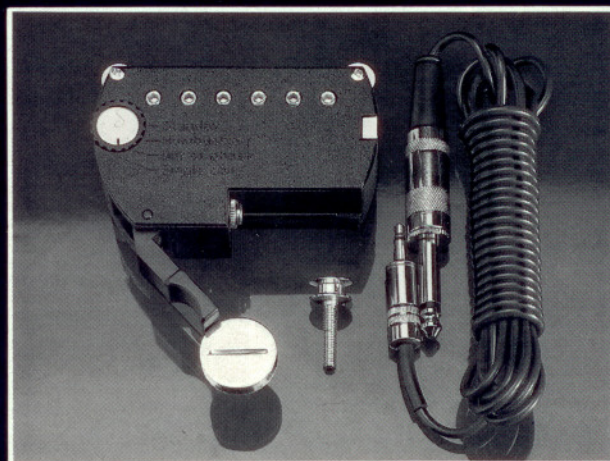

- Dual coils that are oppositely phased and individually shielded to totally remove all noise and hum.
- Specially designed magnetic structure for uniform volume balance on all six strings.
- A unique height adjustment system allows infinite height adjustment of the pickup while its in the sound hole.
- Six individual Alen head pole piece screws allow precise adjustment of individual string volume.
- A uniquely designed mounting system allows the pickup to be mounted quickly without removing the strings and also insures that it will fit virtually all flat top acoustic guitars.
- D. C. Resistance: 5.4 K Inductance: 2.7 Henry
- Three year warranty.

## Western I

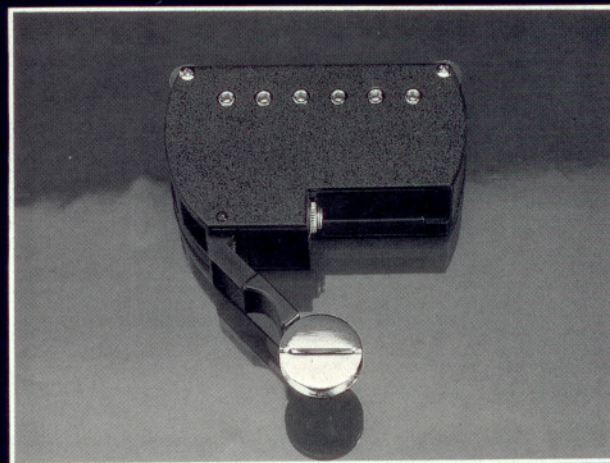

Ref. No. 209  
black-satin finish  
built-in volume control  
allows volume adjustment  
directly at the pickup

## Western II

Ref. No. 210  
black-satin finish  
built-in volume control  
allows volume adjustment  
directly at the pickup.  
built-in 4-position mode switch  
allows the player to select full  
humbucking, out of phase  
and single coil sound or standby.

## Western III

Ref. No. 214  
lower priced acoustic pickup  
with the technical features  
of the Western I and II but  
without the built-in controls.
